

High Density Bolus

SKIN TREATMENT

eXasKin

Choose the most precise skin treatment with photons

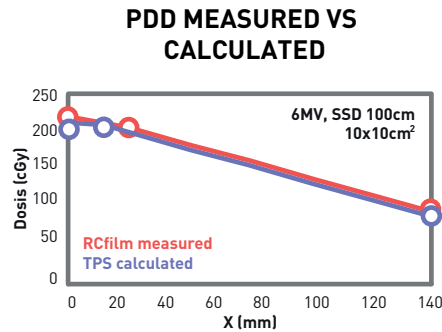

eXaSkin

eXaSkin is the only high-density, highly-adaptable bolus in a paste which allows you to obtain customisable boluses in only 3 minutes. There is no necessity for complex 3D printing systems or modifications to the routine workflow.

eXaSkin offers the following benefits:

- ▶ Adapts completely to the skin.
- ▶ Avoids the rebuild-up effect even in the presence of air.
- ▶ Eliminates build-up area with less bolus density.
- ▶ Bolus density selection is no longer relevant.
- ▶ Density, shape and thickness data of eXaSkin are obtained by the TPS from CT imaging.
- ▶ Auto-fixable to thermoplastics to improve positioning and reproducibility.
- ▶ Does not dry, shrink or break.
- ▶ Achieve precise application of radiation dosage.

PPD curve analysis demonstrates that eXaSkin:

- Completely eliminates "build-up" areas in 6MV.
- Is a calculable product in accordance with TPS data.

“ The only customizable bolus with high density and adaptation that does not require complex 3D systems. ”

eXaSkin

Quick and Easy Personalized Bolus

eXaSkin can make customisable boluses in less than 3 minutes. It allows for precision dosage on the skin in any clinical situation, and is highly recommended in highly-critical regions, such as the scalp, hands, neck, outer ear, facial contours or genitals.

Customisation in less than 3 minutes

- ▶ Without 3D printers.
- ▶ Without additional investment in equipment.
- ▶ Without necessity for additional staff or technical knowledge.
- ▶ Without need to change routine workflow.

How to use eXaSkin

- 1 Prepare a sheet of eXaSkin following the recommended process in the instructions provided.
- 2 Lay out the sheet on the region required and, if necessary, position the thermoplastic on top of it.
- 3 Wait for the sheet to harden completely (approximately 2 minutes).
- 4 Acquire CT images for simulation.
- 5 eXaSkin can be calculated in a precise manner so that the treatment planning is identical to other photon treatments. The eXaSkin density should never be overwritten.

iMold Kit (iMold S & iMold L)	AG1001004.4
iMold XL	1004.10

“The combination of eXaSkin as a submask with any head masks improves immobilisation substantially.”

iMold

eXaSkin Mold

iMold is designed to produce homogeneous layers of eXaSkin with a specific size.

▶ **iMold Kit** includes:

- **iMold S** produces sheets of 17x11x1 cm.
- **iMold L** with internal frame produces sheets of 17x11x0.5 cm and without internal frame sheets of 17x22x0.5 cm.

- ▶ **iMold L without internal frame:** with internal frame produces sheets of 19.7x13.5x0.5 and without frame sheets of 24.5x19.7x0.5.
